

## Portfolio

You need to create a web-based portfolio displaying your 4 projects in this class.

For each project you'll want to share

- Annotation/description (relevant information about the project – such as learner audience, learning objectives, media, collaborators, etc.)
- Artifacts (as discussed in class – display the project as appropriate. Photos, screenshots, etc. in addition to links to the full project if you wish to allow others to download the full project).

Ideally you'll develop a standardized page design, then drop in the info on a new page for each project, and link them all off a portfolio “home” page.

To turn it in, email me your URL.
